API V2 DOCUMENTATION

Perficient v2 api

Backend api and Sever documentation for perficient loans

This document contains confidential information about perficient v2 api and 3rd party api's and so must be kept within the confines of perficient

- Api version: 2.0.0
- Base url: <https://api.perficientloans.com>
- Endpoint base url: <https://api.perficientloans.com/api/v2/>
- Callback url: <https://api.perficientloans.com/api/v2/callback>

Frame work and dependencies

- Nodejs (Frame work)
- expressjs
- bodyparser
- cors
- dotenv
- helmet
- mongoose
- multer
- nodemon
- simple-node-logger
- socket.io
- string-crypto
- uuid

Data base

- Mongo dB Atlas

Environment variables

- MERCHANT_ID = "MEC1275" merchant id for making payment comes from 3rd party apis (zynel)
- API_KEY = "26a6e75f6d8030df1f010233414687b77d937b2" api key for making payments, comes from 3rd party apis (zynel)
- API_ID = "cf18cd388682e80215a04d5cbfa9400b498c5d44" api id for payments, from 3rd party apis (zynel)
- PAYMENT_URL = "<https://api.zynlepay.com/zynlepay/jsonapi>" , payment url end point (zynel)
- MONGO_URI = "mongodb+srv://:@perficientloans.pt8qmj6.mongodb.net/zamperficent?retryWrites=true&w=majority" , mongodb database connection key
- PORT = 9800 , local port server is listening to

GitHub repository

- <https://github.com/ilyaseen19/zambia.git>

Branch

- apiV2

Current access to repository and branch

- Master access
 - Abdallah Alhassan, email: alfuty09@gmail.com
- Contributor access
 - Prince Hodalor, email: princehodolor@gmail.com

NB: - repository is private as such access is strictly by invitation

Deployment

- pm2, for managing all processes
- cloud flare, tunnel routing and additional security
- Name cheap, domain name access

- mongodb atlas, data base storage
- firebase image sdk, storing image data
- render, hosting backend and server code
- local environment, complimenting and managing all services

Response Codes and Messages

- 200, request was processed successfully
- 201, data was created successfully
- 400, bad request
- 401, unauthorized request
- 404, data not found
- 500, Internal server error

Messages

- success: true, operation completed successfully
- success: false, operation could not be completed
- data: [] or {}, data returned with response, mostly json format
- message: "", response message
- error: [] or "", error message logged for debugging purposes

Event logging

- all events are logged in the api.perficient.log file

Socket.io

For seamless communication between customer app and admin dashboard

Socket Events

- init : initialization and capturing online customers
- admin_on : checking for online admins
- admin_off : checking for offline admins

- changeAdminActiveStatus : block or unblock admin
- changeCustomerActiveStatus : block or unblock customer
- updateCustome : update customer data
- assignTask : assign task to admins
- unAssignTask: unassing task of admins
- re_assignTask : re-assign task from one admin to another
- remove_user : delete admin
- loanRequest : emit loan request directly from customer app to admin dashboard
- loanStatusChanged : emit review results back to customer from admin dashboard
- disburse_loans : used for manual disbursing, not been used at the moment

NB: - all socket events can be found in socket.controllers.js file

Endpoints and Apis

Healthcheck

Endpoint for checking server health

GET Request

<https://api.perficientloans.com/api/v2/healthcheck>

Check server health status

Admins

Admin endpoints and descriptions

Login

POST Request

<https://api.perficientloans.com/api/v2/admin>

This endpoint allows administrators to login.

Request Body

- userName (string, required): The username of the administrator.

- password (string, required): The password for the administrator.

Response

- Status: 200
- Content-Type: application/json
- Success: true
- Data: {} // returns admin data as a json object

Request body:

Type: String,

```
{
  "userName": "",
  "password": ""
}
```

Create Admin

POST Request

<https://api.perficientloans.com/api/v2/admin/create-admin>

This endpoint allows administrators to be created.

Request Body

- request body is shown bellow
- it should be in a string
- request headers
 - content-type : application/json
 - accept: application/json
- method : Post

Response

- Status: 200
- Success: true
- Data: {} , returns admin data as a json object

Request Body:

Type: String,

```
{  
  "firstName": "",  
  "lastName": "",  
  "userName": "",  
  "phone": "",  
  "email": "",  
  "gender": "",  
  "password": "",  
  "role": "",  
  "department": ""  
}
```

Get all Admins

GET Request

<https://api.perficientloans.com/api/v2/admin/find-all-admins/>

Fetch all administrators' data

Response

- Status: 200
- Success: true
- Data: [], returns admins data as a json

Customers

Find Customer

GET Request

<https://api.perficientloans.com/api/v2/customers/find-customer/:id>

URL parameter is customer ID {mongodb object id, _id}

Response

- Status: 200
- Success: true
- Data: {}, returns single customer data

Create Customer

POST Request

<https://api.perficientloans.com/api/v2/customers/create-customer>

This endpoint allows customers to register.

Request Body

- Request body is shown below.
- string format
- Headers
 - content-type: application/json
 - accept: application/json

Response

- Status: 201
- Success: true
- message: response message after creation
- Data: {}, returns customer data as a json object

Request body:

Type: String,

{

"firstName": "", (string, required)

"lastName": "", (string, required)

"middleName": "", (string, not required)

"phone": "", (string, required)

"dob": "", (string, required)

"gender": "", (string, required)

"ghCard": "", (string, required) NRC card number, it should include all /

"inSchool": "", (string, required)

"eduLevel": "", (string, required)

"resiType": "", (string, required)

"digAddressResi": "", (string, required)

"areaResi": "", (string, required)

"lnmkResi": "", (string, required)

"resiTime": "", (string, required)

"incomeSource": "", (string, required)

"nRelCare": "", (string, required)

"email": "", (string, required)

"bPhone": "", (string, not required)

"mStatus": "", (string, required)

"wkUnit": "", (string, required)

"industType": "", (string, required)

"wkAddress": "", (string, required)

"compAddress": "", (string, required)

"wkLnmk": "", (string, required)

"wkHrs": "", (string, required)

"mthInc": "", (string, required)

"wkContent": "", (string, required)

"emContact1": {"rele": "", "eduLevel": "", "phone": "", "name": ""}, (object, required)

"emContact2": {"rele": "", "eduLevel": "", "phone": "", "name": ""}, (object, required)

"emContact3": {"rele": "", "eduLevel": "", "phone": "", "name": ""}, (object, required)

"isVerified": true, (boolean, required)

"isRegistered": true, (boolean, required)

"contacts": [], (array, required)

"idFront": "", (string, required) front image of id card

```
"idBack": "", (string, required) back image of id card
}
```

Verify Customer

PATCH Request

<https://api.perficientloans.com/api/v2/customers/verify-customer/:phone>

Verify customer phone number to login customer again, if the number exist

Request parameter is customer phone number {phone}

Response

- Status: 200
- Success: true
- message: response message

Add payment method

PATCH Request

<https://api.perficientloans.com/api/v2/customers/add-payment-method/:id>

Creating a payment method for customer

request parameter is customer id {mongo db object id, _id}

Request Body

- Request body is shown below.
- string format
- Headers
 - content-type: application/json
 - accept: application/json

Response

- Status: 201
- Success: true
- message: response message after creation

Request body:

Type: String,

```
{  
  "paymentMethod": "", (string, required)  
  "paymentEmail": "", (string, not required)  
  "networkOperator": "", (string, required)  
  "isVerified": true, (boolean, required)  
}
```

Loans

Get data by admin id

GET Request

<https://api.perficientloans.com/api/v2/loans/get-data-by-admin-id/:id>

data is fetched base on admin roles and departments

request parameter is admin id { userId }

Response

- Status: 200
- Success: true
- message: response message after creation
- Data: []

Get all loans

GET Request

<https://api.perficientloans.com/api/v2/loans/>

Response

- Status: 200
- Success: true
- message: response message after creation
- Data: []

Create call record

PATCH Request

<https://api.perficientloans.com/api/v2/loans/call-records/:ID>

Create call records, during reviewing a case

request parameter is loan or case id {ID}

Request Body

- Request body is shown below.
- string format
- Headers
 - content-type: application/json
 - accept: application/json

Response

- Status: 201
- Success: true
- message: response message after creation

```
{  
  "calledNumber": "",  
  "relation": "",  
  "callResult": "",  
  "callDate": "",  
  "officer": "",  
  "remarks": "",  
  "level": "Audit" // Precollection or Collection or Audit  
}
```

Flag case for clearance

PATCH Request

<https://api.perficientloans.com/api/v2/loans/flag-case-clearance/:ID>

Flag case to be cleared

request parameter is loan / case id {ID}

Request Body

- Request body is shown below.
- string format
- Headers
 - content-type: application/json
 - accept: application/json

Response

- Status: 200
- Success: true
- message: response message after creation

```
{  
  "recordType": "", // Public or Ballance  
  "userId": "",  
  "recieptImg": "",  
  "clearanceDate": "",  
  "amountPaid": "",  
  "clearRemainingAmount": boolean, // true or false  
  "remarks": "",  
  "remainingAmount": "",  
  "actualAmount": "",  
  "reviewedBy": ""  
}
```

Clear case

PATCH Request

<https://api.perficientloans.com/api/v2/loans/clear-case/:ID>

Clear or Close case after it has been flagged for clearance

request parameter is loan / case id {ID}

Request Body

- Request body is shown below.
- string format
- Headers
 - content-type: application/json
 - accept: application/json

Response

- Status: 201
- Success: true
- message: response message after creation

```
{  
  "recordType": "", // Public or Ballance  
  "rejectRemarks": "",  
  "recieptImg": "",  
  "auditResults": "", // reject or cleared  
  "confirmedBy": ""  
}
```

Request extension

PATCH Request

<https://api.perficientloans.com/api/v2/loans/request-extention/:ID>

Requesting an extension on re-payment duration

request parameter is loan / case id {ID}

Request Body

- Request body is shown below.
- string format
- Headers
 - content-type: application/json
 - accept: application/json

Response

- Status: 201
- Success: true
- message: response message after creation

```
{
  "extFee": , digit
  "repDay": ""
}
```

Update case status

PATCH Request

<https://api.perficientloans.com/api/v2/loans/update-case-status/:id>

Changing the status of a case or loan, from review to granted

request parameter is loan / case id {mondodb object id, _id}

Response

- Status: 200
- Success: true
- message: response message after creation

Reject case

PATCH Request

<https://api.perficientloans.com/api/v2/loans/reject-case/:id>

Rejecting a case / loan

request parameter is loan / case id {ID}

Request Body

- Request body is shown below.
- string format
- Headers
 - content-type: application/json
 - accept: application/json

Response

- Status: 200
- Success: true
- message: response message after creation

```
{  
  "reviewOfficer": "",  
  "comment": ""  
}
```

Loan request

PATCH Request

<https://api.perficientloans.com/api/v2/loans/request-case/>

Loan application / request from customer

No request parameter

Request Body

- Request body is shown below.
- string format
- Headers
 - content-type: application/json
 - accept: application/json

Response

- Status: 200
- Success: true

- message: response message after creation

```
{
  "terms": boolean, true or false
  "loanAmount": "",
  "interetsRate": "",
  "paymentMethod": "",
  "repaymentAmount": "",
  "wHeard": "",
  "useLoan": "",
  "loanRepaymentPeriod": "",
  "gpsLocation": "",
  "contacts": [],
  "userId": "", mongodb object id
  "selfie": ""
}
```

Disburse loan

PATCH Request

<https://api.perficientloans.com/api/v2/loans/process-payments/:ID>

Disburse loan to customer after review

request parameter is loan / case id {ID}

Request Body

- Request body is shown below.
- string format
- Headers
 - content-type: application/json
 - accept: application/json

Payment is completed through a third party payment gateway and loan is disbursed base on the response from the third party api response

Response

- Status: 200
- Success: true
- message: response message after creation

```
{  
  "reviewOfficer": "",  
  "comment": "",  
  "requestType": "grant" // value must always be grant for disbursing  
}
```

Re-pay loan

PATCH Request

<https://api.perficientloans.com/api/v2/loans/process-payments/:ID>

Loan re-payment from customer

request parameter is loan / case id {ID}

Request Body

- Request body is shown below.
- string format
- Headers
 - content-type: application/json
 - accept: application/json

Payment is completed through a third party payment gateway and loan is disbursed base on the response from the third party api response

Response

- Status: 200
- Success: true
- message: response message after creation
